

Happy Boo Mini Strategy Guide

A quick guide based on verified Happy Boo mechanics.

Controls

Move with WASD or arrow keys. Aim with the mouse. Press Z for bombs and Escape to pause.

Headstart and pistol

Each run starts with 100 health and a 5 second protected headstart. After that, the pistol auto-fires toward the mouse every 0.5 seconds.

Bombs

Bombs require full health, have a 30 second cooldown, fly toward the cursor, and explode after a 1.4 second fuse. Bomb kills add visible score but not coin-earning gun-score.

Food

Food heals 20 health only. It does not boost speed, score, damage, or coins. Use it to survive and regain full health for bomb access.

Enemies

Slimes are the base enemy. Bees can appear after score 12. Spike enemies can appear after score 35 and deal the highest contact damage.

Coins and skins

Coins are awarded after death from gun-score, which comes from projectile kills. Skins are cosmetic only and do not improve stats.

Practical Tips

- Use the 5 second headstart to choose space before enemies chase.
- Keep distance from bees and spike enemies because they hit harder.
- Use pistol kills when you want coins.
- Save bombs for dense groups or dangerous moments.
- Eat food when damaged so you can reach full health and unlock bomb use again.
- Pick skins because you like the look, not because they upgrade Boo.
